

Everything Else is Tack Strip

There are many ways to manufacture Carpet Tack Strip. Some good. Some not. Performance and durability are equally varied.

Did you know that there are 121-miles of Tack Strip in the average truckload of carpet gripper? That's a lot of nails – about 13-million give or take. What are the odds that you'll find inconsistencies and defects? Up there... unless the truck is carrying MAXXIMUS™ Engineered Carpet Gripper. For the first time, precision gripper meets the floor.

MAXXIMUS™ Engineered Carpet Gripper is constructed unlike any other carpet gripper. Designed from the floor up for enduring performance, MAXXIMUS™ Engineered Carpet Gripper is constructed using premium birch and high-tensile steel nails. Unlike other gripper products, assembly is not arbitrary. MAXXIMUS™ Engineered Carpet Gripper is manufactured using a one-of-a-kind, computer controlled, fully automated production line.

Why is this important? No more double-stripping, no more restretches, no more plywood delamination, no more broken nails.

Each MAXXIMUS™ Engineered Carpet Gripper model is an application-specific product. Four performance designs match your residential and commercial installations with the right gripper for the job. You'll never be off-spec again. Power stretching is a breeze. Your customers will know the difference.

The practicality of all this quite simple: Your flooring installations deliver consistently superior performance and demand less installation time. Your customer enjoys a great floor that starts beautiful and stays beautiful for years to come.
