

STIXX™ ENGINEERED GLUE STICKS

FOR PROFESSIONAL CARPET EDGE SEALING AND SEAM WELDING

"Don't just seal it—WELD IT!"

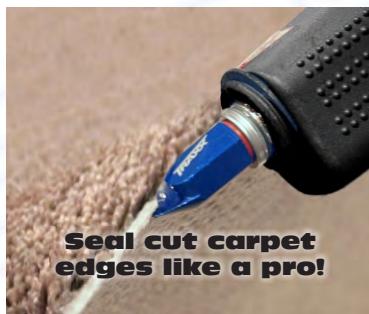

All cut carpet edges must be **sealed** prior to creating the carpet seams. Many professional installers have made the wise decision to use glue sticks to **seal** carpet edges instead of liquid seam sealers because the edges dry within seconds. STIXX™ S-106 glue sticks are excellent for this purpose.

STIXX™ glue sticks are also engineered to create a **welded** seam during the seaming process. Cut carpet edges that have been sealed with STIXX™ S-106 glue sticks use the heat on the top portion of the hot-melt iron to reactivate the sealed edges and **weld** the two cut edges back together.

Seam peaking is caused by the seam's ability to hinge. When carpet edges are butt-**welded** back together with STIXX™ glue stick, hinging is eliminated.

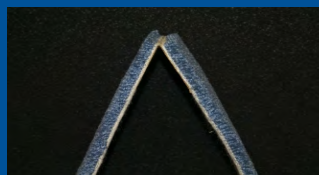

STIXX™ glue sticks contain a UV tracer visible under black light to ensure CRI-104 & CRI-105 compliance.

- Seal carpet edges to prevent fraying.
- Weld carpet seam edges into one piece to prevent seam hinging.
- Eight 7/16" (11.3mm) diameter / 10" (254mm) long sticks per bag.
- Great for all types of carpet and general repairs.
- An essential component of the TRAXX Carpet Edge Welding System.

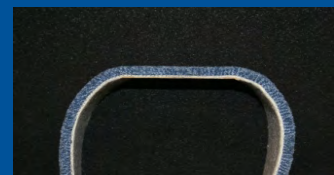

Use
FUSION™ Carpet Edge Sealing Tip!
— sold separately —

As part of the TRAXX Carpet Welding System, STIXX™ Engineered Glue Sticks will help you weld carpet seams that virtually eliminate visibility and peaking!

...without Fusion™!

Using Fusion™ from TRAXX

Order No. S-106
8 sticks per bag /
25 bags per carton
